

AMENDMENTS TO THE SPECIFICATION

On page 19, please replace the paragraph being on line 16 with the following paragraph:

--The Video View 1008 can be used when viewing playback of recorded files. In this case, in addition to the Physical Channel and PID dialog boxes 1002 1004, a slider 1404 can appear appears to indicate file playback (see Fig. 2.5). Also, the physical channel dialog box 1002 can be inactive since playback from a file is unaffected by channel tuning. The PID selection can still be active. Note that while playing from disk, it is not necessary for a valid channel to be tuned. The Tune button 1104 and the field 1102 in the Physical Channel dialog box 1002 can be disabled. The PID values, however, remain important since the complete stream was recorded. The correct PIDs for the desired program in the recorded stream are still needed to view the program. --
